

Detection And Classification Of Oral Epithelial Dysplasia

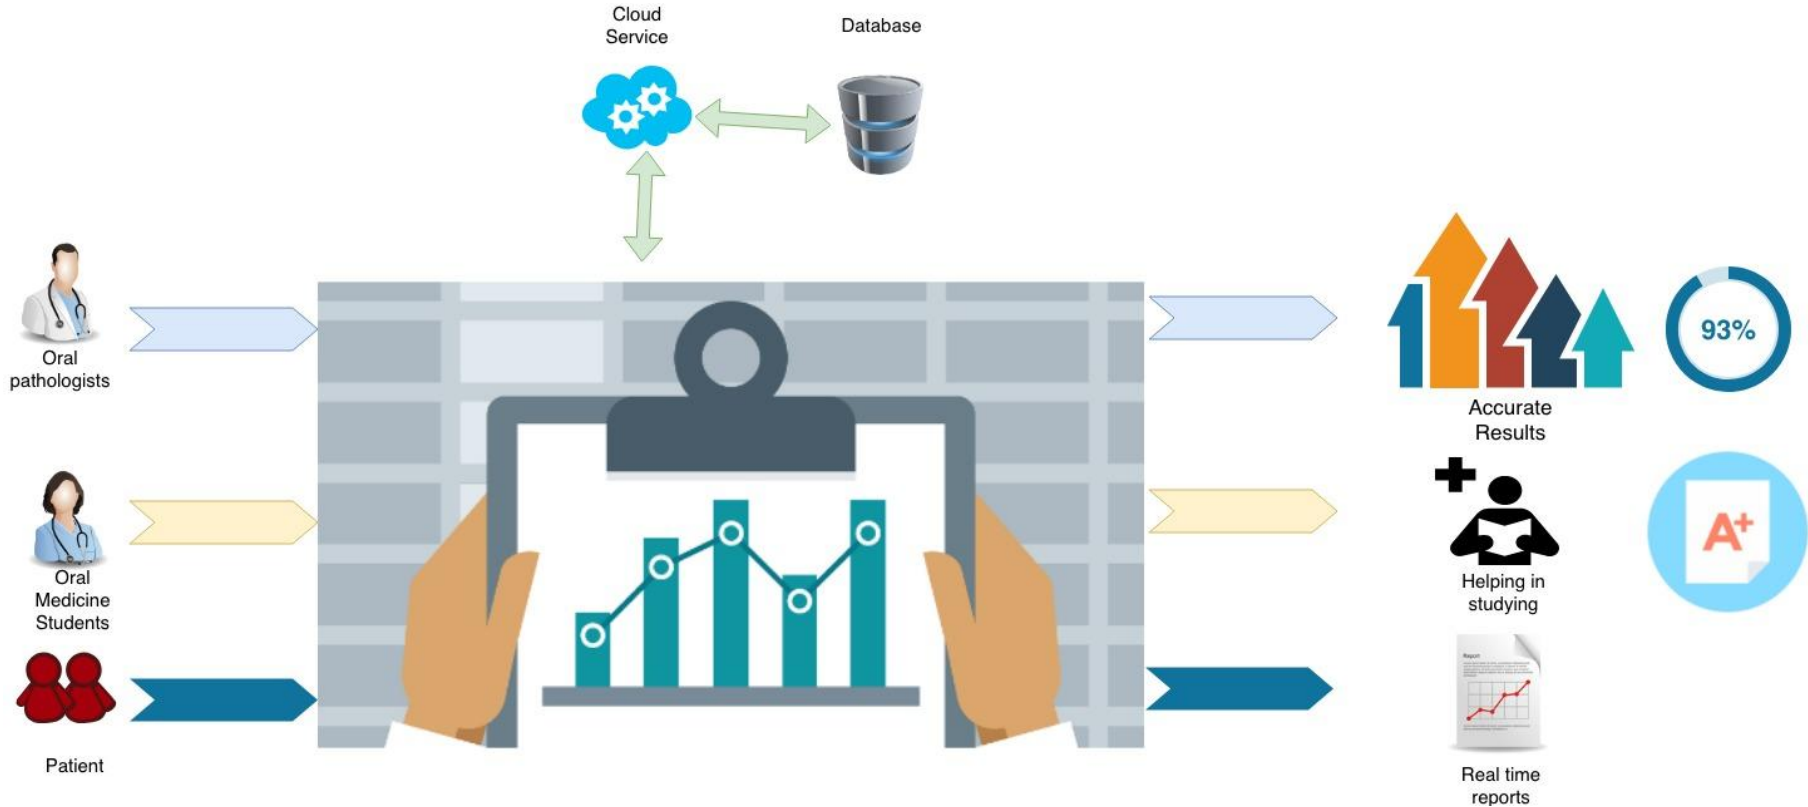

By Mahmoud Ahmed, John Mounir, Youssef Alaa and David
Adel

Supervised by Dr. Ashraf Abdelraouf and Eng. Noha El Masry

Objective

“**Automating** the detection and classification of epithelial dysplasia through image processing, but as well as clustering images to increase the **accuracy** of the classification which is normally done by the human eye.”

to me ▾

Dear sir,

Greetings for the day. In view of the fact that digital pathology is considered a scientific revolution all over the world; and regarding its ability to provide unbiased, rapid and accurate help for the pathologists. I would like to declare the importance of the project of "Epithelial Dysplasia system" in this concern. Provisionally, this system opens a new window for applying digital pathology to detect and classify the epithelial dysplasia, that meets the market needs and shows a great expectations to solve some of the equivocal problems facing the pathological medical field. I'm fully supporting this promising system until it comes to the light.

Sincerely yours,

Hazem Abdelazim, MBCh, MSc.
A.Lecturer of Pathology,
National Cancer Institute - Cairo university.
Specialist of Pathology,
Children Cancer Hospital - Egypt (57357).
