### **Banking system**

2017

Implemented using Java, Tool: NetBeans.

## **GRADUATION PROJECT:**

### Name:

Detecting Education level using Facial Expressions in E-learning Systems.

### Description:

Our proposed system is designed to detect the next educational level of the learner while taking the exam by capturing his facial expressions during the exam, and then predict the next level for the learner after finishing the exam. The main goal is to help learners to have the most accurate level by an automated system without an evaluation from the instructor.

### In parallel with the implementation, there were many deliverables:

- Proposal Document.
- SRS (Software Requirements Specification).
- SDD (Software Design Description).
- Final thesis Documentation.

### Field of Knowledge:

Machine Learning and Web Application.

### Tools:

Python for creating Models, PHP for connection to database from python and building System backend, MySQL for database creation and Flask for combining between modules.

### Published a paper:

In 2020, in (ICECCE) Proc. of the 2nd International Conference on Electrical, Communication and Computer Engineering 12-13 June 2020, Istanbul, Turkey

## **PROFESSIONAL SKILLS:**

- Adobe Photoshop.
- HTML/CSS.
- XML.
- C++.

- MySQL.
- Java.
- Python
- Android Studio.
- Microsoft Office.
- Open GL
- Web GL
- Firebase.
- PHP.
